

Belize Sustainable Ocean Plan

Welcome to

Belize Sustainable Ocean Plan

# Belize Sustainable Ocean Plan

## Geospatial Workshop

---

Utilizing SeaSketch and Marxan

Date: April 14 – April 16, 2025

Location: Toucan Room, Belize Biltmore Plaza, Belize City, Belize

This is brought to you by

in partnership with

**Belize Fund For A Sustainable Future**

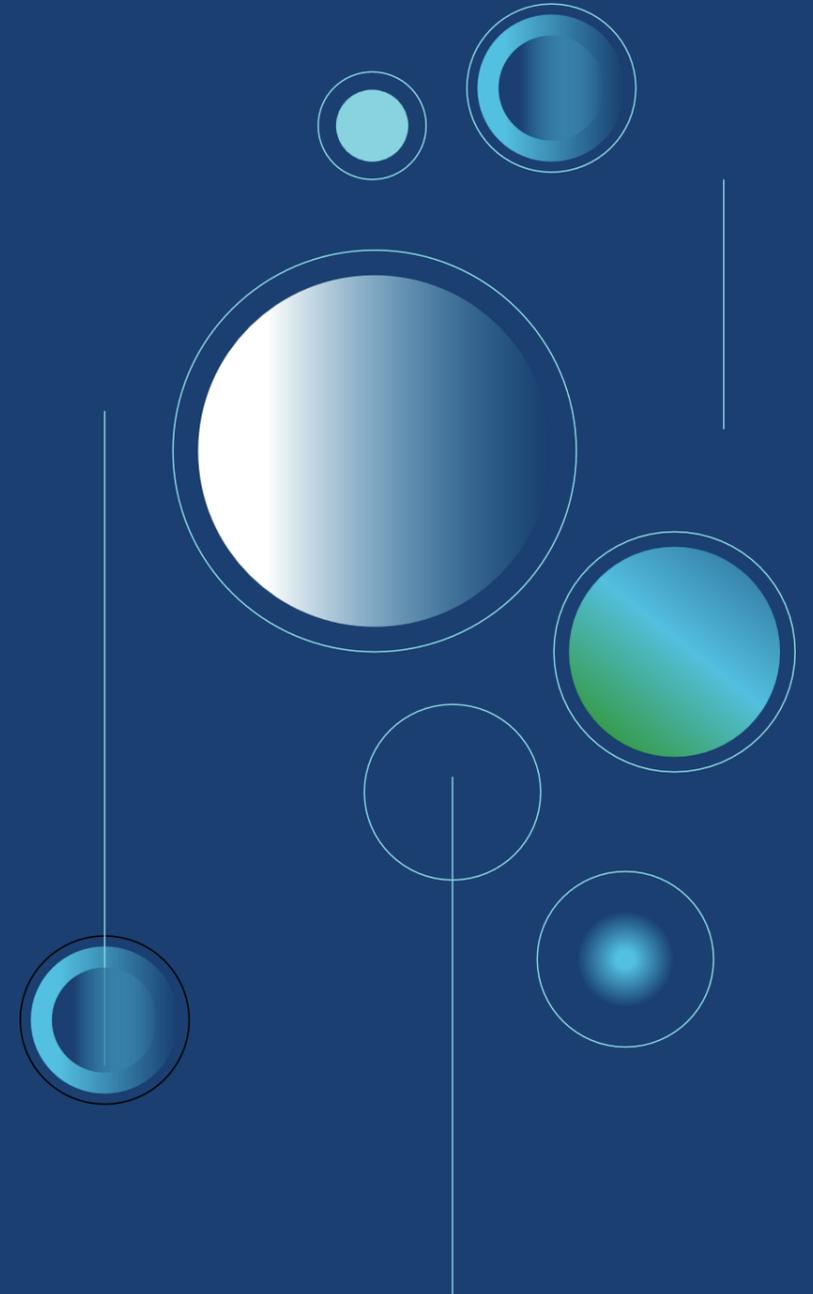

Belize Sustainable Ocean Plan

# Day 3: Marxan

---

Belize Sustainable Ocean Plan  
Geospatial Workshop

Date: April 16, 2025

# House Keeping

## **Arrival & Registration**

Please arrive at least 15 min. before, so you have time to check in. The workshop begins promptly each day.

## **Break Times**

**Morning Break:** 10:15 – 10:30 AM

**Lunch Break:** 12:30 – 1:30 PM (Lunch provided. Tickets will be distributed)

**Afternoon Break:** 2:30 – 2:45 PM

## **Wi-Fi Access**

Free Wi-Fi available. **WIFI: Bwplusbiltmore**

## **Restrooms**

Restrooms are located outside

# House Keeping

## **Phones & Devices**

Please silence phones and devices during sessions.  
Laptops/tablets welcome for note-taking and workshop tasks.

## **Engagement**

Please participate actively in all activities.  
Group discussions and team tasks are key parts of the workshop.

## **Feedback**

Daily feedback will be conducted.

## **Health & Safety**

If you feel unwell, inform a facilitator privately.

# DAY 3 - AGENDA

**Focus:** Input validation, gap identification, and forward planning

<b>Time</b>	<b>Session</b>	
9:00 am	<b>Doors Open, Networking</b>	
9:15 am	<b>Day 2 Recap &amp; Overview of Day 3</b>	Review insights and validate previous outputs
9:30 am	<b>Marxan Costs Overview</b>	Group input on costs and lock-out zones
10:15 am	<b>Coffee Break</b>	
10:30 am	<b>Activity: Identify Costs</b>	
12:00 pm	<b>Activity: Results Review</b>	
12:30 pm	<b>Lunch</b>	
1:30 pm	<b>Activity: Using SeaSketch Planning Tool to draw lock-out areas for Marxan</b>	
2:30 pm	<b>Coffee Break</b>	
2:45 pm	<b>Synthesis of all inputs</b>	Present combined outputs (features, costs, zones)
3:00 pm	<b>Group Discussion and Reflection</b>	Identify unresolved issues and data gaps
3:45 pm	<b>Summary Review</b>	Confirm inputs for modeling
4:00 pm	<b>Workshop Wrap up and Next Steps</b>	Share next steps, contact updates, and participant feedback
4:30 pm	<b>Adjourn</b>	

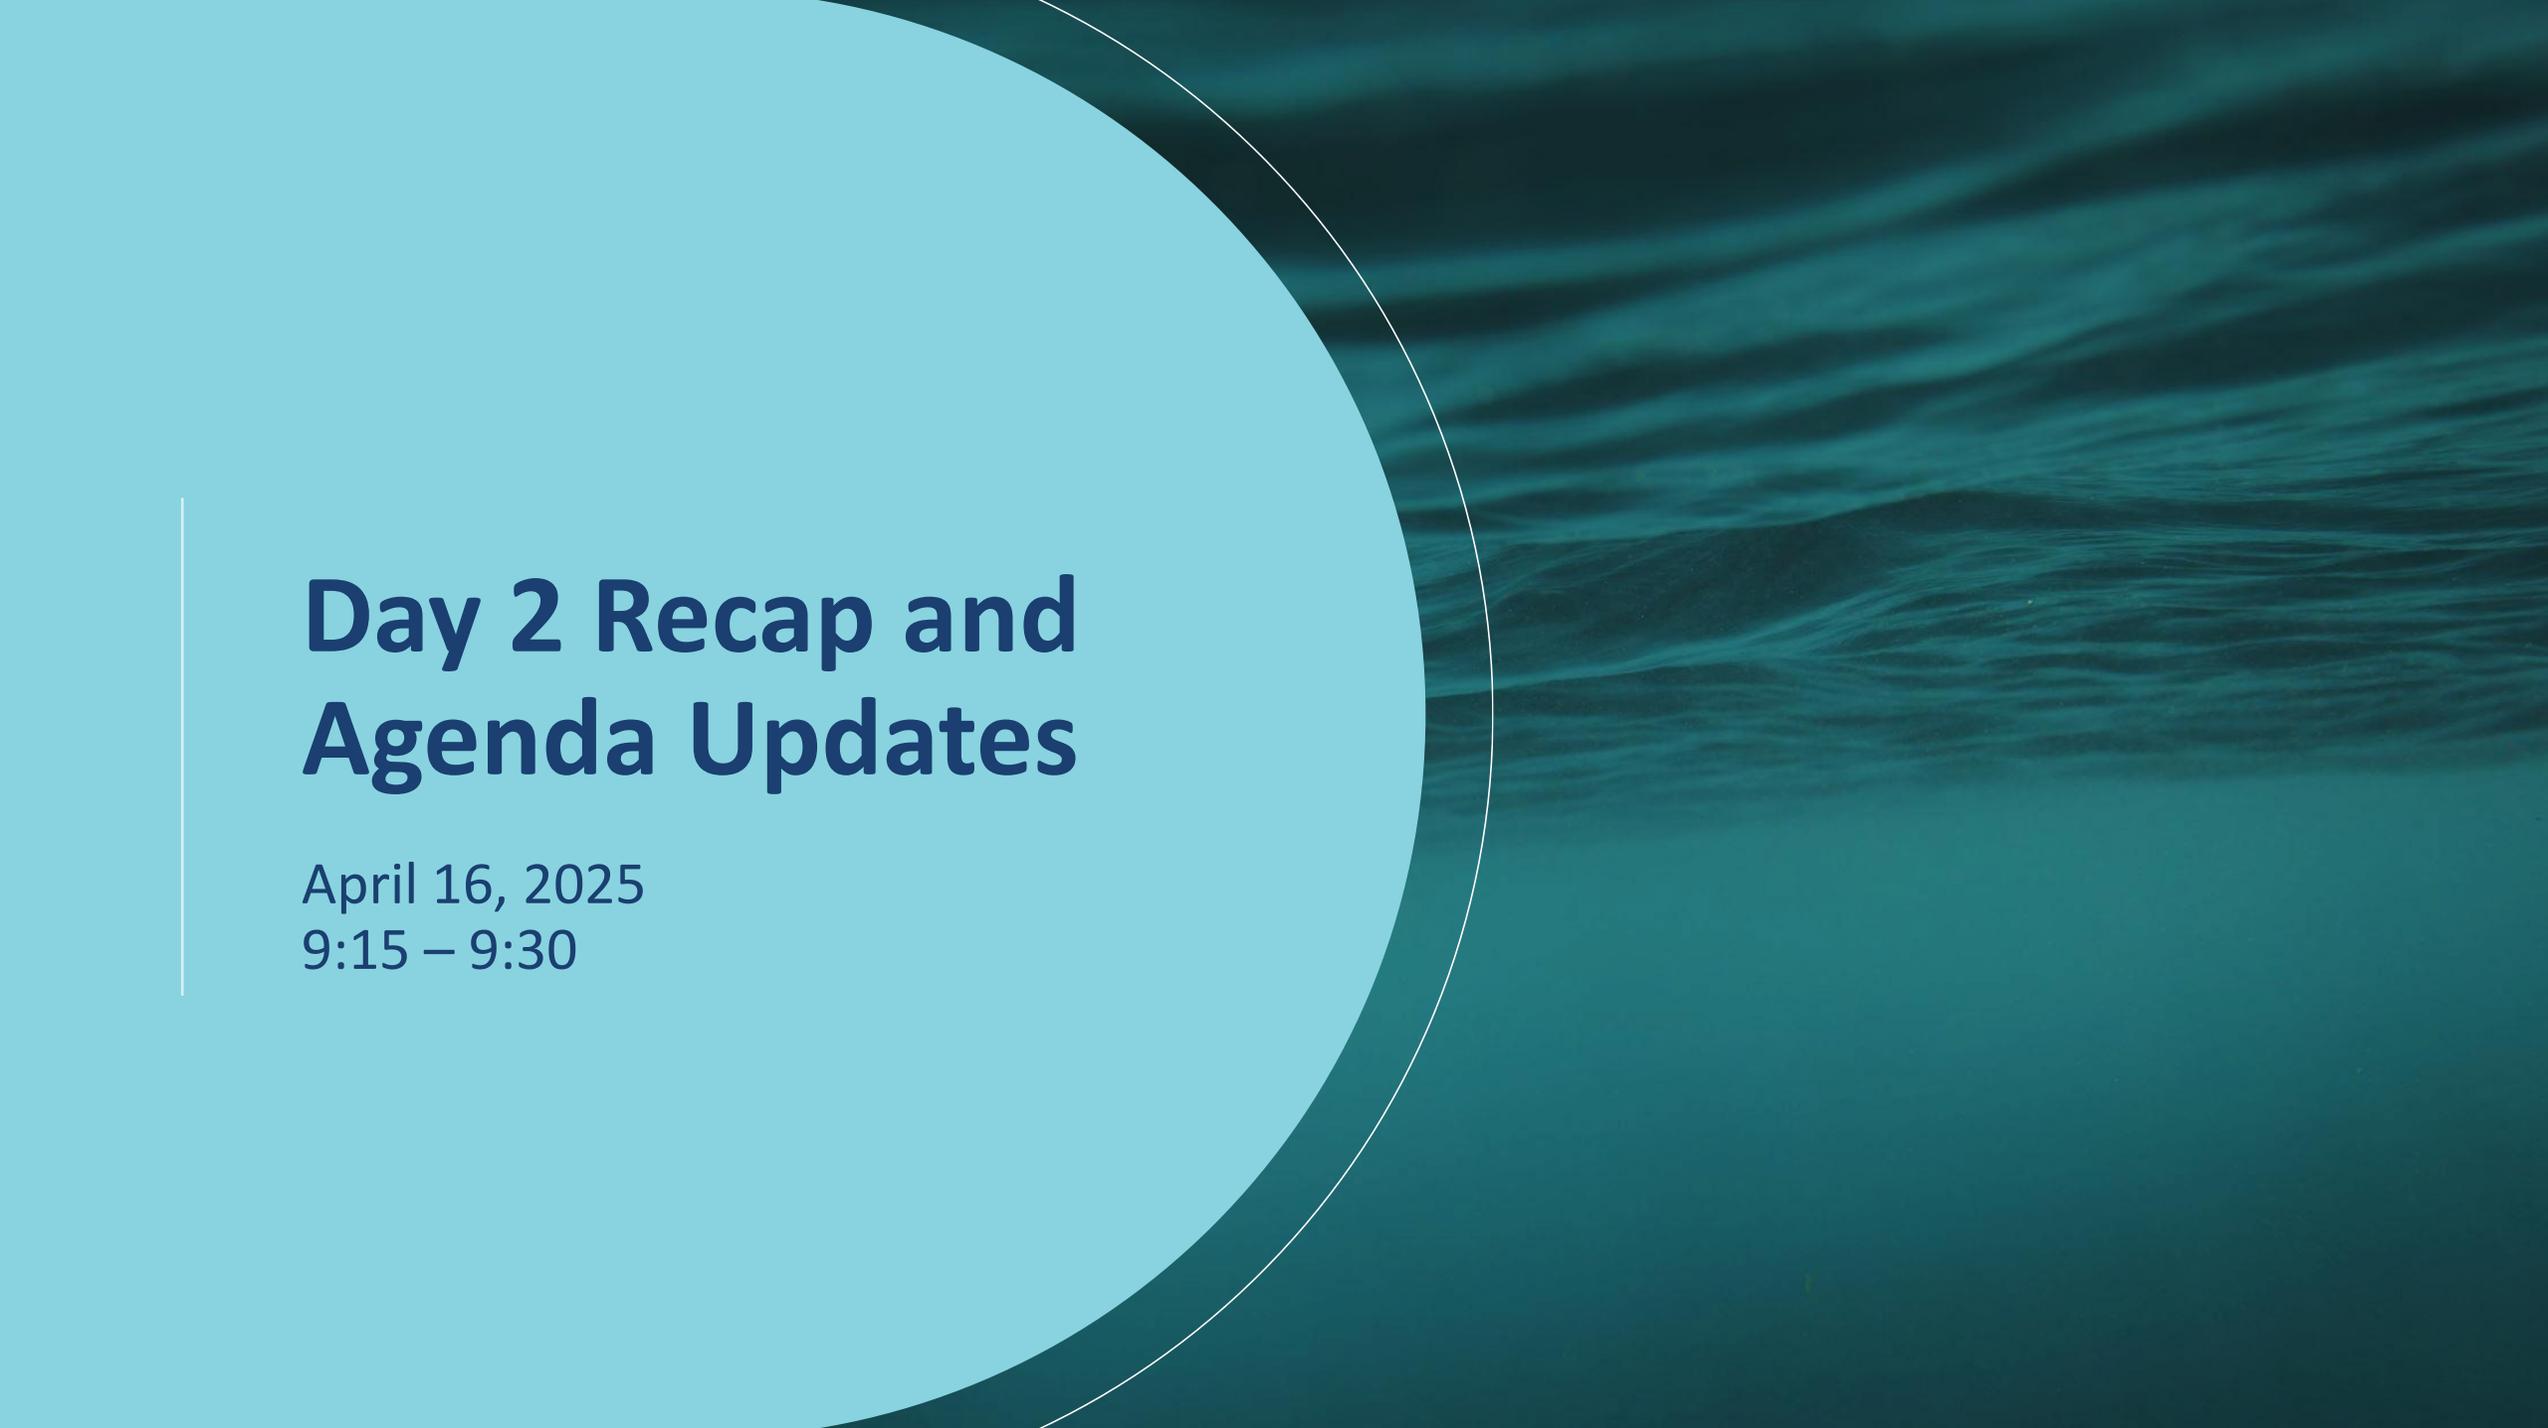

Belize Sustainable Ocean Plan

# Day 3: Marxan

Belize Sustainable Ocean Plan  
Geospatial Workshop

April 16, 2025

# Day 2 Recap and Agenda Updates

April 16, 2025  
9:15 – 9:30

## Session Goal:

- Reflect on Day 2 takeaways; align expectations for Day 3.

Share Feedback

**Expected Outcome:**

## Wave Check – What's Surfacing?

1. What is a feature?
2. Can you explain the relationship between SeaSketch and Marxan?

# Marxan Costs Overview

April 16, 2025  
9:30 – 10:15

## Session Goal:

- Provide overview of cost in Marxan

Understanding what costs are in Marxan and how they might identify appropriate spatial data inputs to reflect costs in the BSOP context.

**Expected Outcome:**

Presenter:

**Rick Tingey**

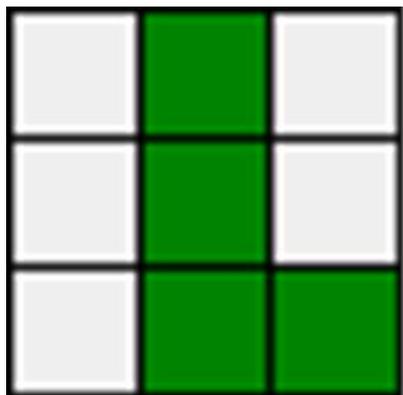

*Principal*

# Marxan Outputs

Solution 1

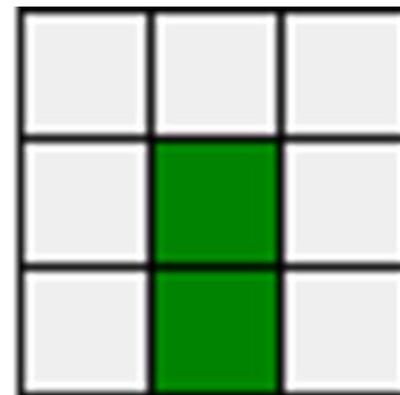

Solution 2

Solution 3

Solution 4

Solution 5

1	3	3
0	4	0
0	3	3

Numbers represent how many times each Planning Unit was selected

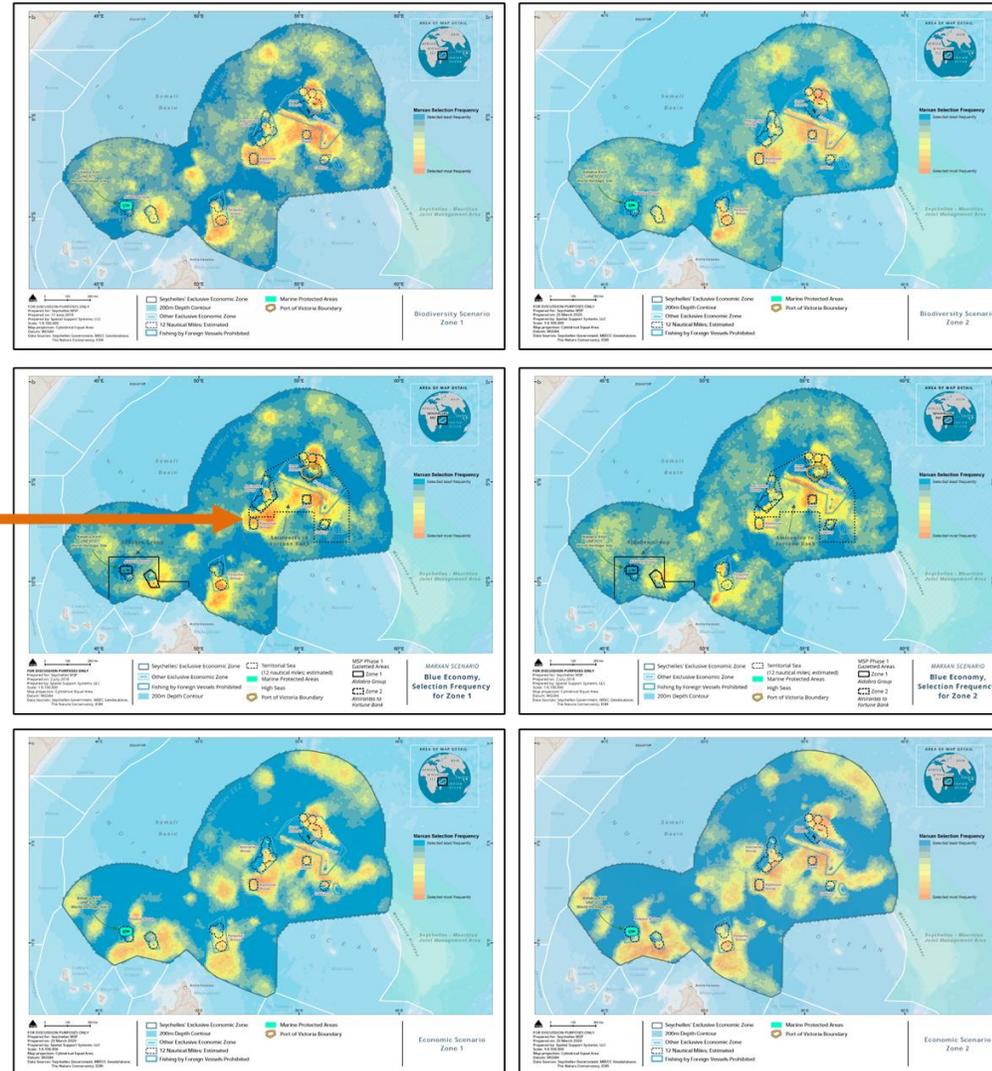

# Seychelles Examples

3 spatial scenarios x 2 Zones to identify high priority areas for biodiversity conservation.

Areas with consistently high 'Selection Frequency' informed the zoning design options in Phase 2 of the MSP (2019-2020).

Habitat representation goals (30%) met in all spatial scenarios.

Selection Frequency values highlighted specific areas.

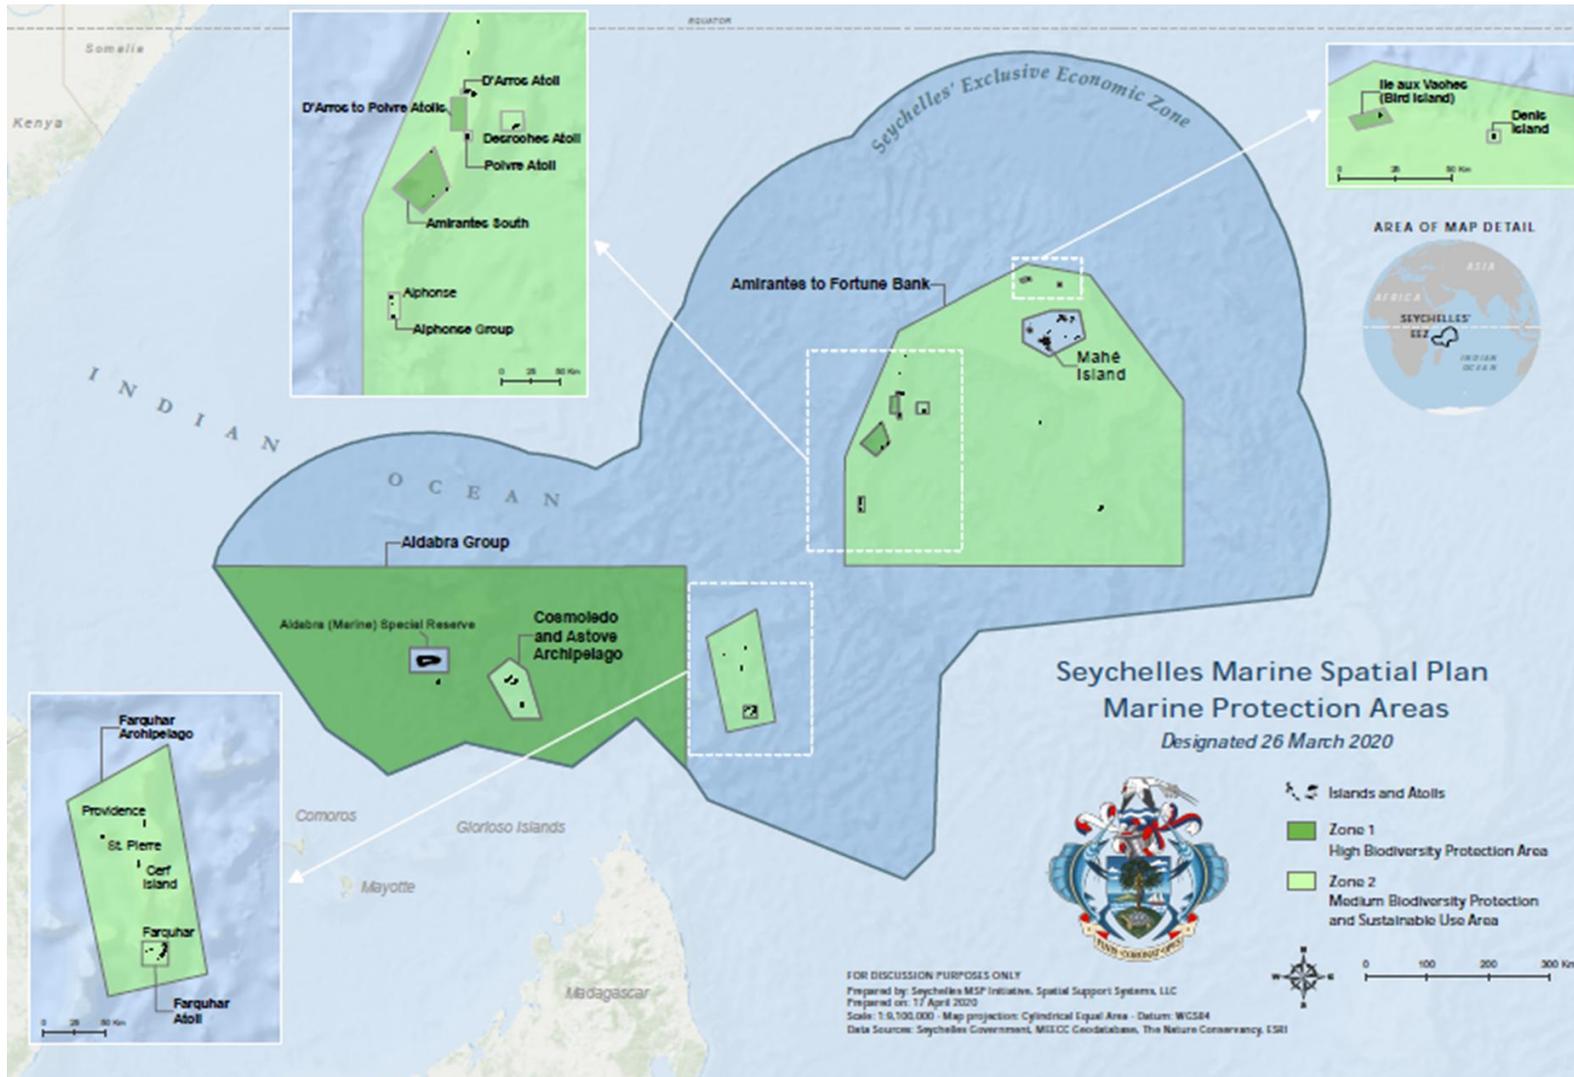

**BIODIVERSITY  
BIAS  
SCENARIO**

**BLUE  
ECONOMY  
BIAS  
SCENARIO**

**ECONOMIC  
BIAS  
SCENARIO**

# Final Seychelles Zoning Design

# What is a Cost?

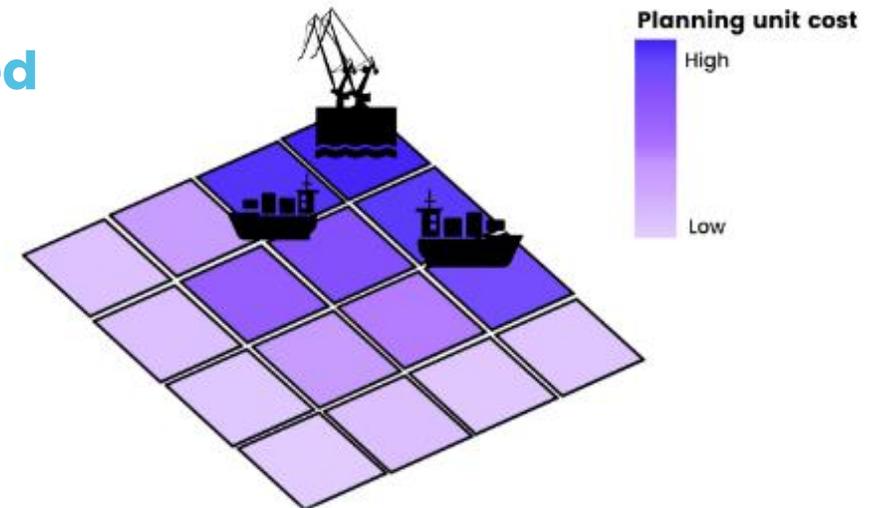

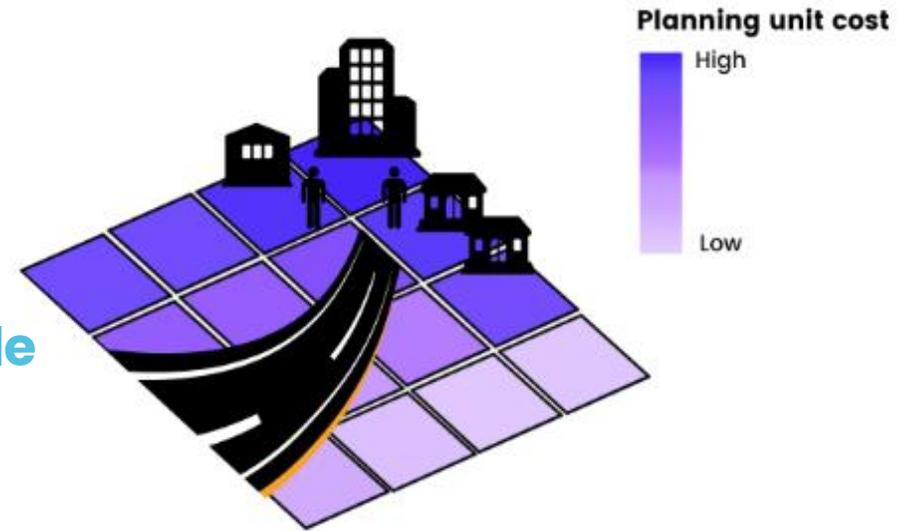

In Marxan, costs are values that make it less desirable to select a planning unit for protection.

**Cost** = What Marxan tries to minimize

The cost layer directly affects which areas are selected

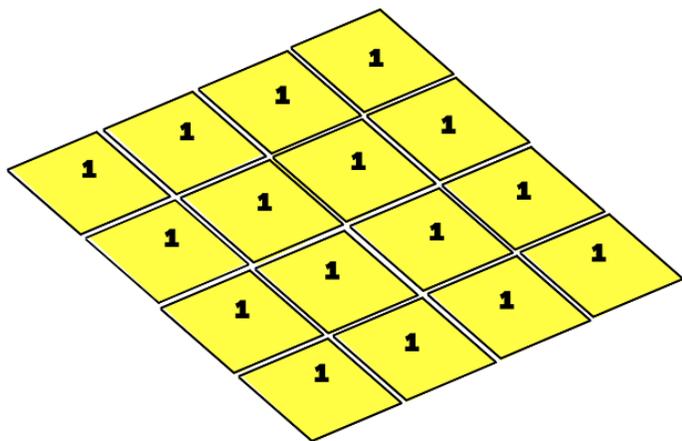

- **Socioeconomic impacts**
  - e.g., fishing revenue, tourism value
- **Conflicts between ocean uses**
- **Ecological risk**
  - e.g., areas with pollution or development pressure

A planning unit with a high-cost value is less likely to be selected in output scenarios.

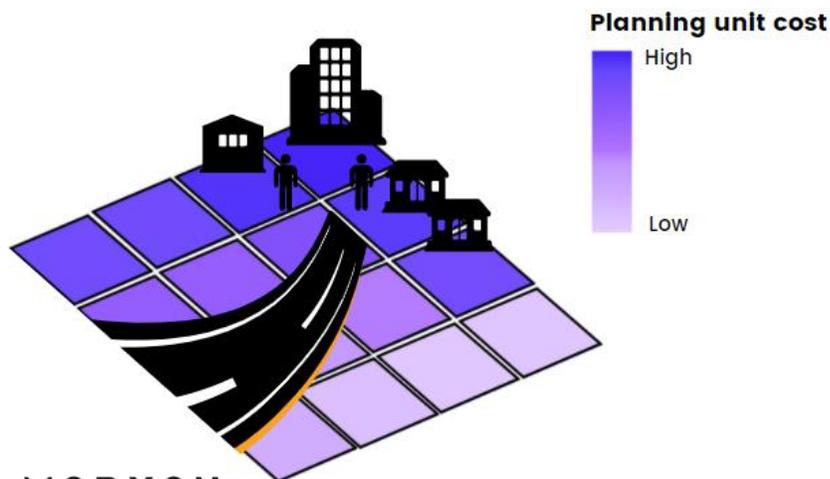

# Costs are Summarized by Planning Units

Planning unit cost = equal to the area (1km<sup>2</sup>)

Costs reflect socioeconomic (or environmental) factors, which, if minimized, could help the conservation plan be implemented more **efficiently, effectively** and **reduce conflicts**.

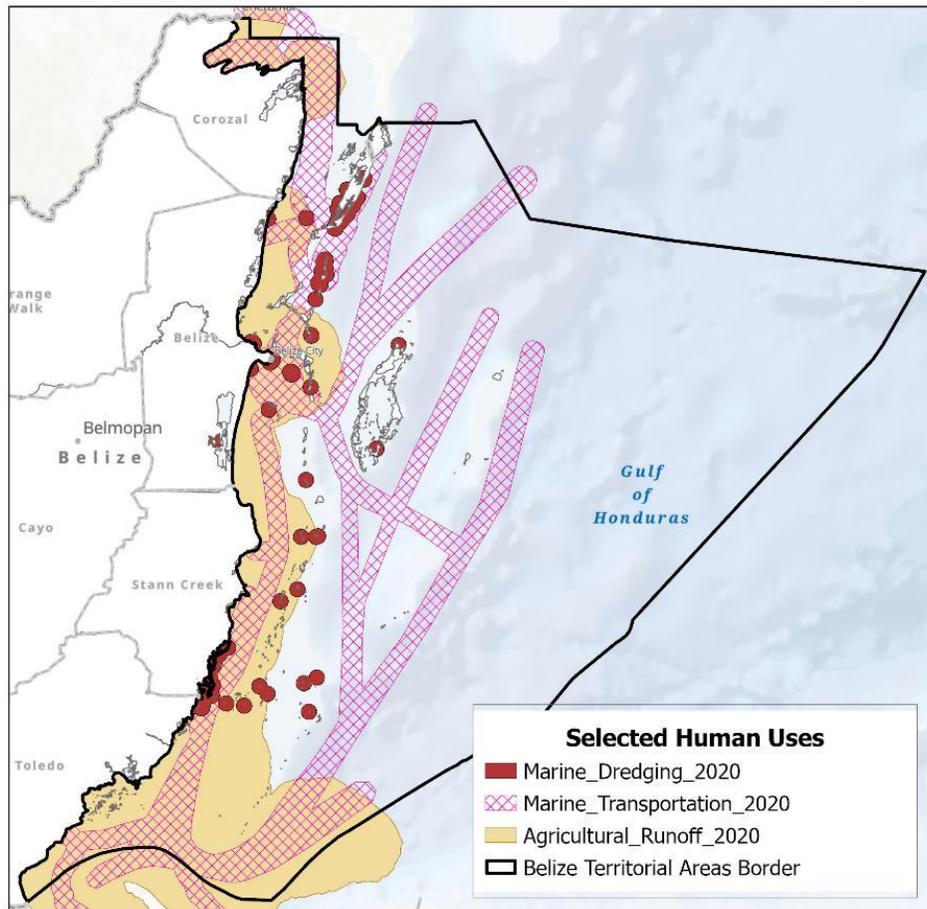

- **Action Costs (\$\$)** – Costs associated with doing conservation
- **Proxy Costs** – May be used when specific cost data not available (e.g., coastal population, accessibility/distance to key features)
- **Opportunity Costs** – Economic losses due to implementation of a conservation action

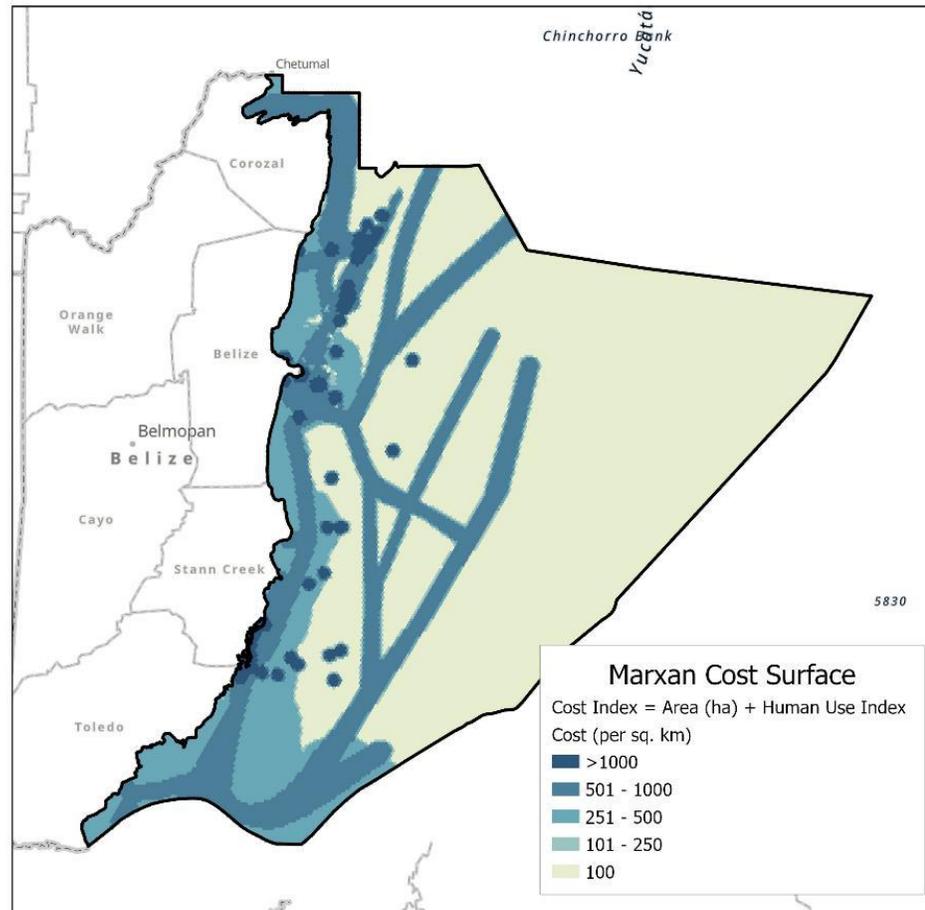

# Example Cost Scenario

## Avoid Existing Human Uses

### Human Uses (example)

### Cost Surface

### Cost Function:

#### Activity

- Agricultural Run-off
- Marine Transportation
- Marine Dredging

#### Cost Index

- 2.5x
- 5.0x
- 10.0x

# Best Practices for Choosing Costs

## Match Cost to Your Objective

- **Action cost** if you want to minimize budget needs
- **Opportunity cost** if you want to reduce user conflict (e.g., fishing, tourism)
- **Ecological cost** if you want to avoid risk to sensitive areas

## Use Data That's Available and Trustworthy

- Use **real data** when possible (e.g., tourism zones, participatory fishing maps)
- **Proxies** are acceptable Use area as a fallback, but be clear it's a proxy (e.g. for management expense)

# Best Practices for Choosing Costs

## Keep It Simple and Transparent

- One clear cost layer is better than a complex mix
- Avoid “black box” cost indexes

## Make It Meaningful to Stakeholders

- Use understandable terms
- Explain what the cost represents in each scenario and why it matters

# Belize Marxan Application in 2015

Cost Layer	Weight	Description & Buffers
Coastal Settlements	2	<b>Population centers.</b> A buffer was applied based on population size (Belize City: 10 km, Towns: 5 km, Villages: 3 km).
Aquaculture	1	Operational <b>shrimp farms.</b> A 500m buffer was applied from the mouth of impacted streams.
Agricultural Runoff	3	High-concentration areas of <b>pesticide and herbicide</b> runoff. No additional buffer applied.
Marine Transportation	1	Major <b>shipping routes</b> , water taxi lanes, and ports mapped as linear features.
Dredging (Mining)	4	Large-scale <b>mining or dredging</b> operations (exceeding 16,000 cubic yards per year). A 1.5 km buffer was applied.
Dredging (Registered Quarry)	4	Extraction activities involving 5,000–16,000 cubic yards. A 750m buffer was applied.
Dredging (Artisanal / Small Scale)	1	Small-scale extraction with hand tools only. A 250m buffer was applied.
Coastal Development	3	Highlighted <b>developed and cleared land</b> areas. A 1 km buffer was applied.
Fishing Pressure	3	Areas targeted for <b>commercial fishing.</b>
Highly Vulnerable Areas	1	Areas identified as highly <b>vulnerable to climate change</b> (e.g., reef degradation, sea level rise).

QUESTIONS

**Coffee Break**  
10:15 – 10:30

# Identify Costs

April 16, 2025  
10:30 – 12:00

## Session Goal:

- Get stakeholders input on cost inputs to Marxan

Participants have identified a preliminary list of costs and associated weights as Marxan inputs, as well as potential additional datasets to be considered.

**Expected Outcome:**

Presenter:

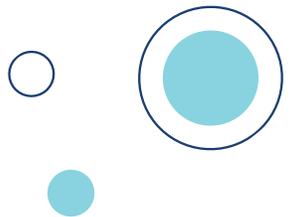

**Will McClintock**

Director - McClintock Lab  
- SeaSketch

**Walk through of OUS  
heatmap to discuss  
potential use as a cost  
layer.**

# IDENTIFY COST

- Using cost and data explanations on the printouts “**Marxan Costs Table**” and reflecting on the OUS heatmap information that Will just explained;
- Fill out the following recording form.

# Sample of recording form:

- **Cost layer:** Name of data set to be used to represent an area
- **Spatial Accuracy:** Comment on whether the data set accurately describes the cost
- **Impact Level:** How strongly do you want to avoid this factor in a protected area?
- **Your Priority Rating:** How strongly do you feel about including this in the Marxan analysis?
- **Rationale/Notes:** If you think there's a cost layer we don't have in SeaSketch or OUS, kindly add it here and provide your reasoning for including this cost.

- **Pink = High cost**
- **Orange = Medium**
- **Green = Low**

Cost Layer	Spatial Accuracy	Impact Level	Your Priority Rating	Rationale/Notes
	<input type="checkbox"/> High <input type="checkbox"/> Med <input type="checkbox"/> Low	1. Lowest Impact 2. Little Impact 3. Moderate Impact 4. Highest Impact	<input type="checkbox"/> High <input type="checkbox"/> Med <input type="checkbox"/> Low	
	<input type="checkbox"/> High <input type="checkbox"/> Med <input type="checkbox"/> Low	1. Lowest Impact 2. Little Impact 3. Moderate Impact 4. Highest Impact	<input type="checkbox"/> High <input type="checkbox"/> Med <input type="checkbox"/> Low	

# WORLD CAFÉ ROUND 3

## Instructions:

- Rotate through **2 cost tables** (12-15 minutes per table)

## While reviewing, consider the following:

- Do you agree with the costs and weights that have been used in previous analyses?
- What are the implications if we ignore this cost?
- Which of these cost types feels most relevant to your sector?
- What trade-offs do you anticipate needing to make?
- Think about what cost data they trust and what's missing.

# WORLD CAFÉ ROUND 3

**Remember!** OUS outputs could be used as cost inputs.

Vote with dots

- **Pink = High cost**
- **Orange = Medium**
- **Green = Low**

**Note:** Please list any costs you can think of that aren't included in the current list and suggest how these data might be obtained.

# Read Out of Results

April 16, 2025  
12:00-12:30

## Session Goal:

- Share cost inputs and shared decisions.

Verified list of identified costs and associated weights as Marxan inputs from previous activity.

**Expected Outcome:**

# READ OUT OF ACTIVITY RESULTS BY GROUP

## Instructions:

- Each group (or table host) will present:
  - Key cost layers they prioritized
  - Suggested impact level and priority
  - Any concerns or disagreements

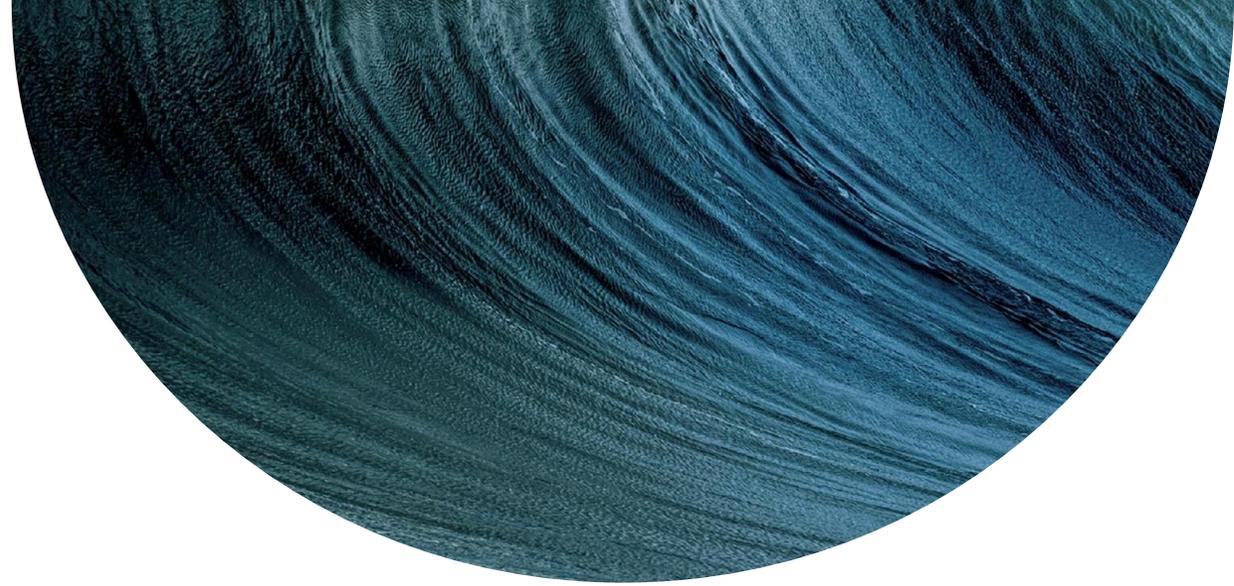

**Lunch 12:00**

**We Return at 1:00**

# Table Check-Ins

- Any Materials needed
- Temperature of the Groups
- Any Concerns or Questions before we proceed

# DAY 3 - AGENDA

**Focus:** Input validation, gap identification, and forward planning

Time	Session	
12:30 pm	<b>Lunch</b>	
1:30 pm	<b>Activity: Using SeaSketch Planning Tool to draw lock-out areas for Marxan</b>	
2:30 pm	<b>Coffee Break</b>	
2:45 pm	<b>Synthesis of all inputs</b>	Present combined outputs (features, costs, zones)
3:00 pm	<b>Group Discussion and Reflection</b>	Identify unresolved issues and data gaps
3:45 pm	<b>Summary Review</b>	Confirm inputs for modeling
4:00 pm	<b>Workshop Wrap up and Next Steps</b>	Share next steps, contact updates, and participant feedback
4:30 pm	<b>Adjourn</b>	

The background features a close-up of water ripples in shades of blue and white. A large, light blue circle is positioned on the left side, partially overlapping the water image. A thin white vertical line is located to the left of the main text.

# Using SeaSketch Planning Tool to draw lock-out areas for Marxan

April 16, 2025  
1:30-2:30

## Session Goal:

- Obtain stakeholder input on lock-out inputs to Marxan

Identified potential lock-out areas to be considered in Marxan analysis.

**Expected Outcome:**

Presenter:

**Will McClintock**

Director - McClintock Lab  
- SeaSketch

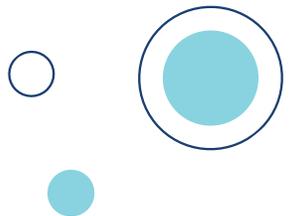

# Lock-Out Areas

Areas to be excluded from the Marxan solution.

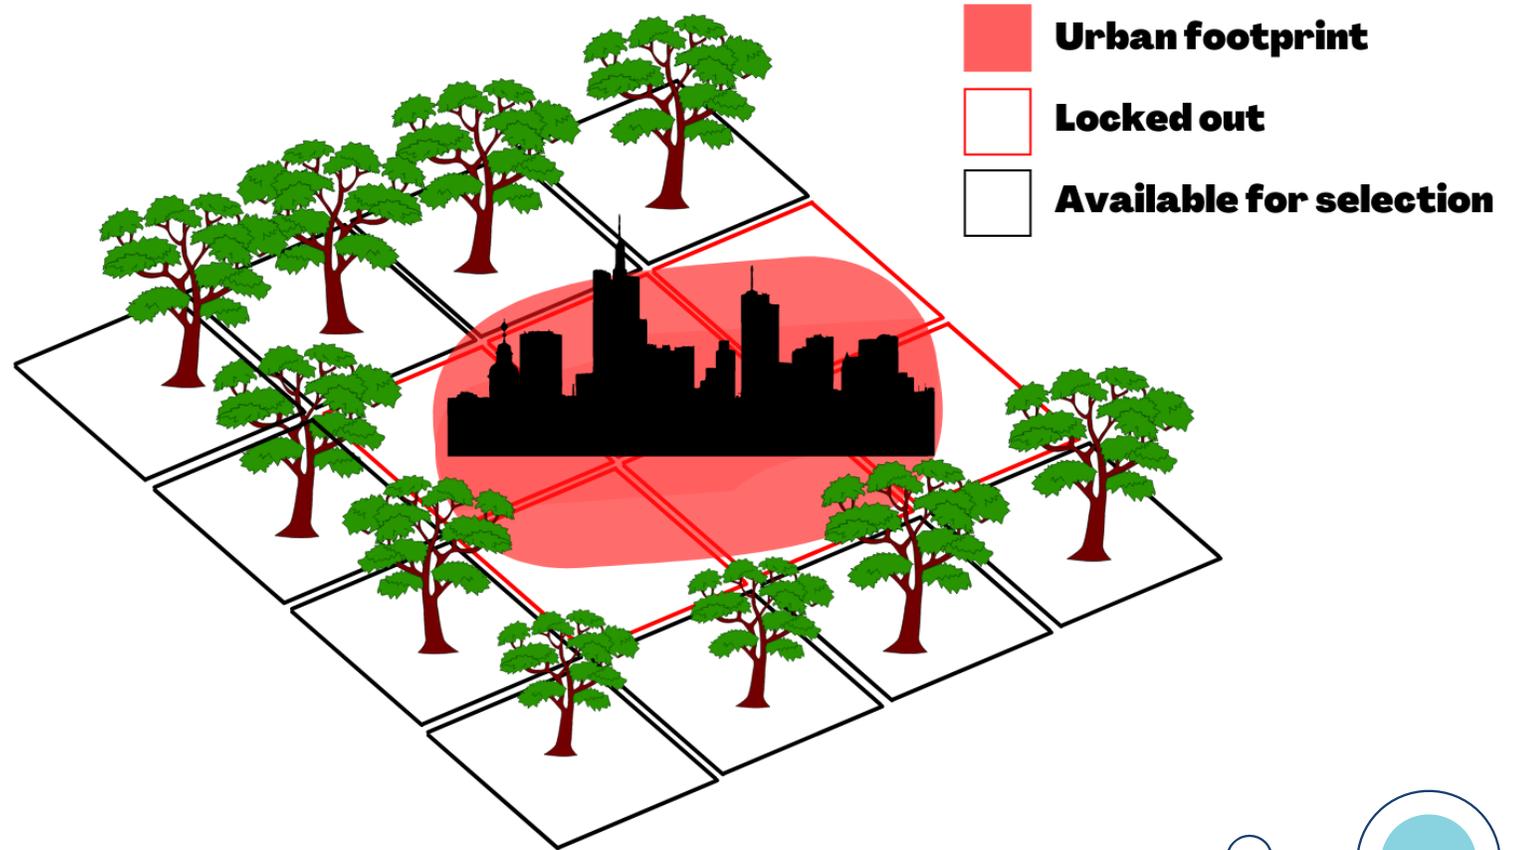

## **Common lock-out areas include locations that are:**

- Already used for critical infrastructure (e.g., shipping lanes, submerged pipeline and cable corridors)
- Politically or culturally restricted (e.g., military exclusion zones, submerged archaeological sites)
- Other economically, culturally, or socially important areas

# Lock-Out Areas

In Marxan, lock-out areas are treated as non-selectable. These are areas that should **NOT** be considered for Biodiversity Protection Zones

# PRACTICE USING SEASKETCH TO IDENTIFY LOCK-OUT AREAS.

## Instructions:

- In small groups or pairs, use SeaSketch to draw draft lock-out areas
  - Note: Lock-out areas are NOT good candidates for conservation (*e.g., military zones, highly developed areas, high-conflict areas*)
- Post your sketches to the shared forum
- Include in your forum comments:
  - A name for the proposed lock-out zone
  - Rationale for the lock-out (*e.g., traditional use area, highly developed area; high conflict area*)
- Be prepared to explain your reasoning

**Coffee Break**

2:30 – 2:45

# Small Group Discussion

April 16, 2025  
3:00 – 3:45

## Session Goal:

- Provide an opportunity for participants to reflect on preliminary Marxan inputs.

Additional thoughts, comments, and context for Marxan inputs to be considered in the next steps.

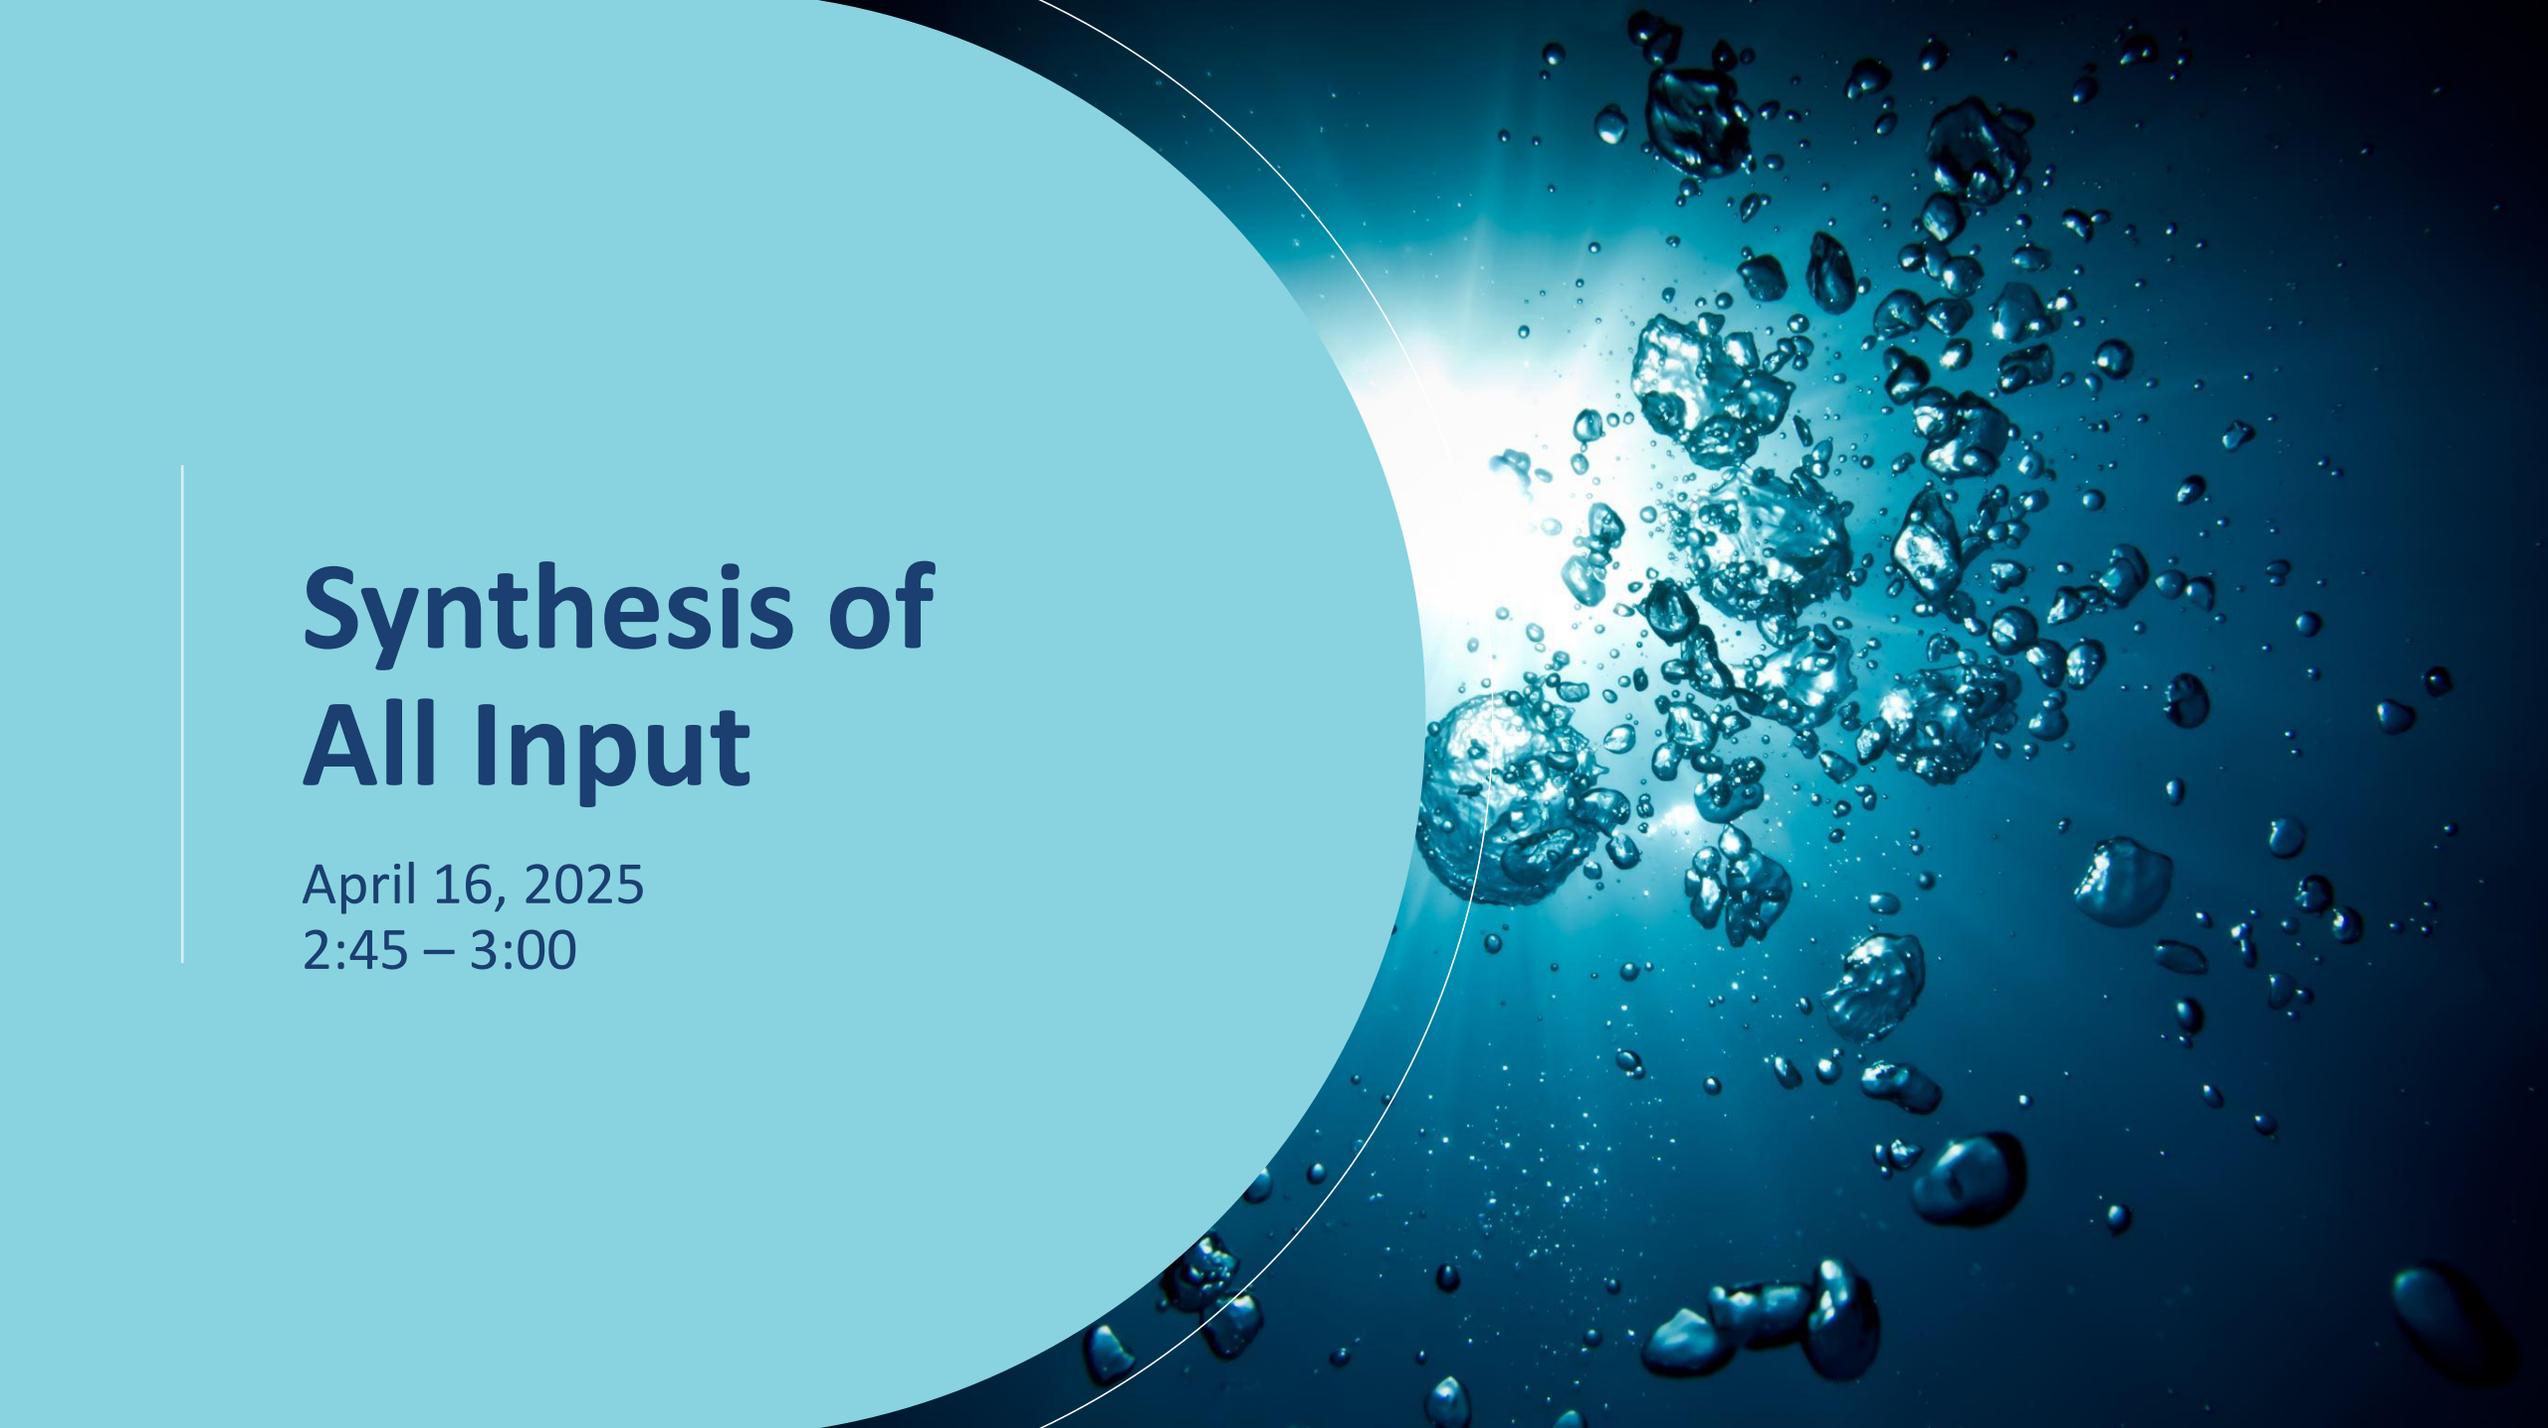

**Expected Outcome:**

# WORLD CAFÉ ROUND 4

## Instructions

- Based on the Lock-out areas you observed:
  - Are you in agreement with what was posted to the forum by the team you analyzed?
  - Would you adjust the boundaries of the lock-out area?
  - Are there any other comments regarding the lock-out activity?

The background features a dynamic scene of water bubbles of various sizes, some appearing to rise or fall, set against a dark blue gradient. A bright, circular light source is visible on the right side, creating a lens flare effect and illuminating the bubbles. A large, light blue circular shape is positioned on the left side of the frame, partially overlapping the text area.

# Synthesis of All Input

April 16, 2025  
2:45 – 3:00

## Session Goal:

- Present overview/summary of all input (related to Marxan inputs) provided throughout the workshop.

Understand the breadth of feedback provided and potential areas of consensus/disagreement

**Expected Outcome:**

## FEATURE

## CURRENT % OR TARGET % PROTECTION

## NOTES

FEATURE	CURRENT % OR TARGET % PROTECTION		NOTES
	Current %	Target %	
Spawning Aggregation Sites	100%		Spawning Aggregation Sites should be included as a layer on SeaSketch
Manatee Sightings & Migration		100%	
Benthic (Sandy, Flats)		50%	Supports many economic industries
Seagrass		75%	
Mangrove	33.4%	70%-85%	All mangroves should be protected
Turtle Nesting Sites	100%		
Indicator & Commercial Species (Sea Urchins, Sharks, Snappers, Pelagics)		50%	
Coral	50.3%	50%-75%	% Coral coverage is not accurately reflected on SeaSketch
Coral Reef / Mangrove (In the context of shoreline protection)	50.3%	50%-75%	% Coral coverage is not accurately reflected on SeaSketch

Your Priority Rating

## FEATURE

## CURRENT % OR TARGET % PROTECTION

## NOTES

Sharks

Endemic Seagrass species that are found in Placencia

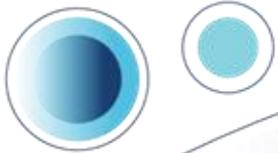

Current %

Target %

30%

Good baseline data exists for Turneffe, Lighthouse, Sapodilla Cayes, and Ambergris Caye.

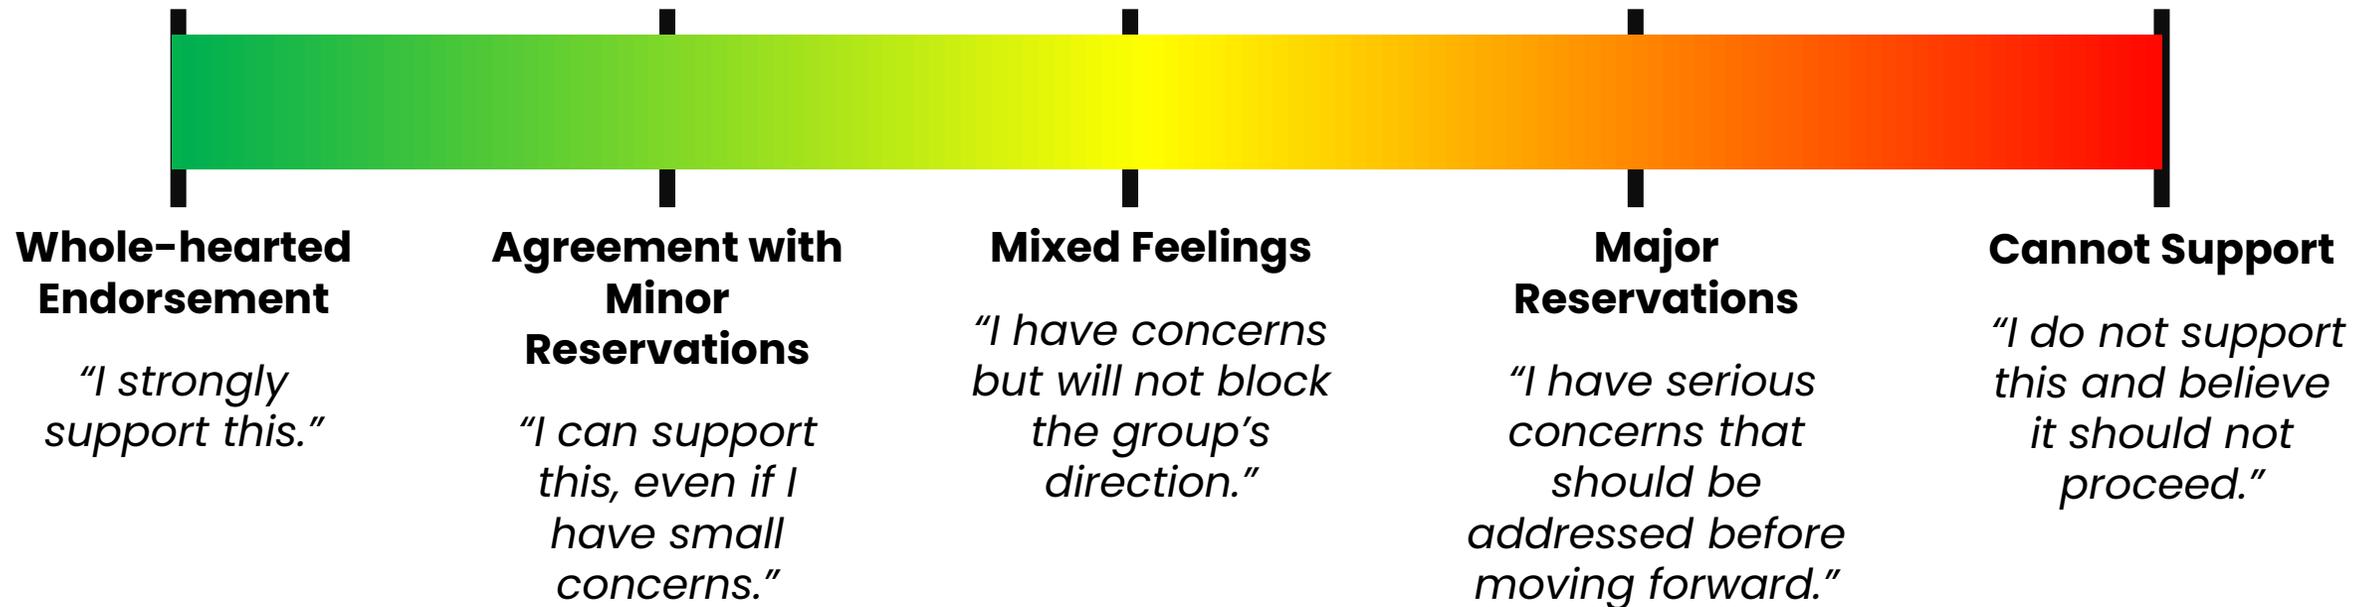

Community members in Placencia, Independence, and Sien Beight are in favor of protection.

# Simplified Gradients of Agreement Scale

To facilitate efficient and transparent decision-making during the workshop, we will utilize Gradients of Agreement Scale when needed:

**HOW TO USE:** When asked, put your hand up for the item that best represents your position

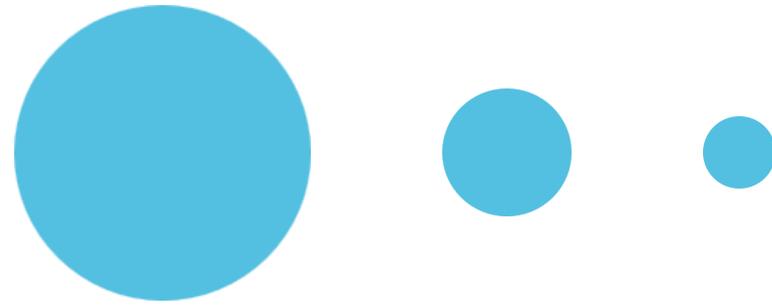

# Wrap UP

April 16, 2025  
3:00 – 3:30

**WORKSHOP  
WRAP UP AND  
NEXT STEPS -**

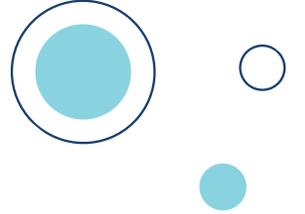

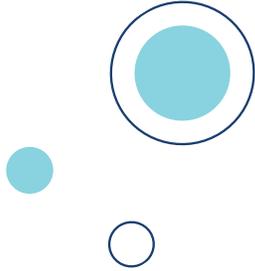

What happens after the workshop (data collection & cleaning, Marxan scenario modeling, synthesis reporting)

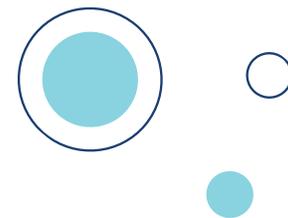

When and how participants will be engaged again

# Participants

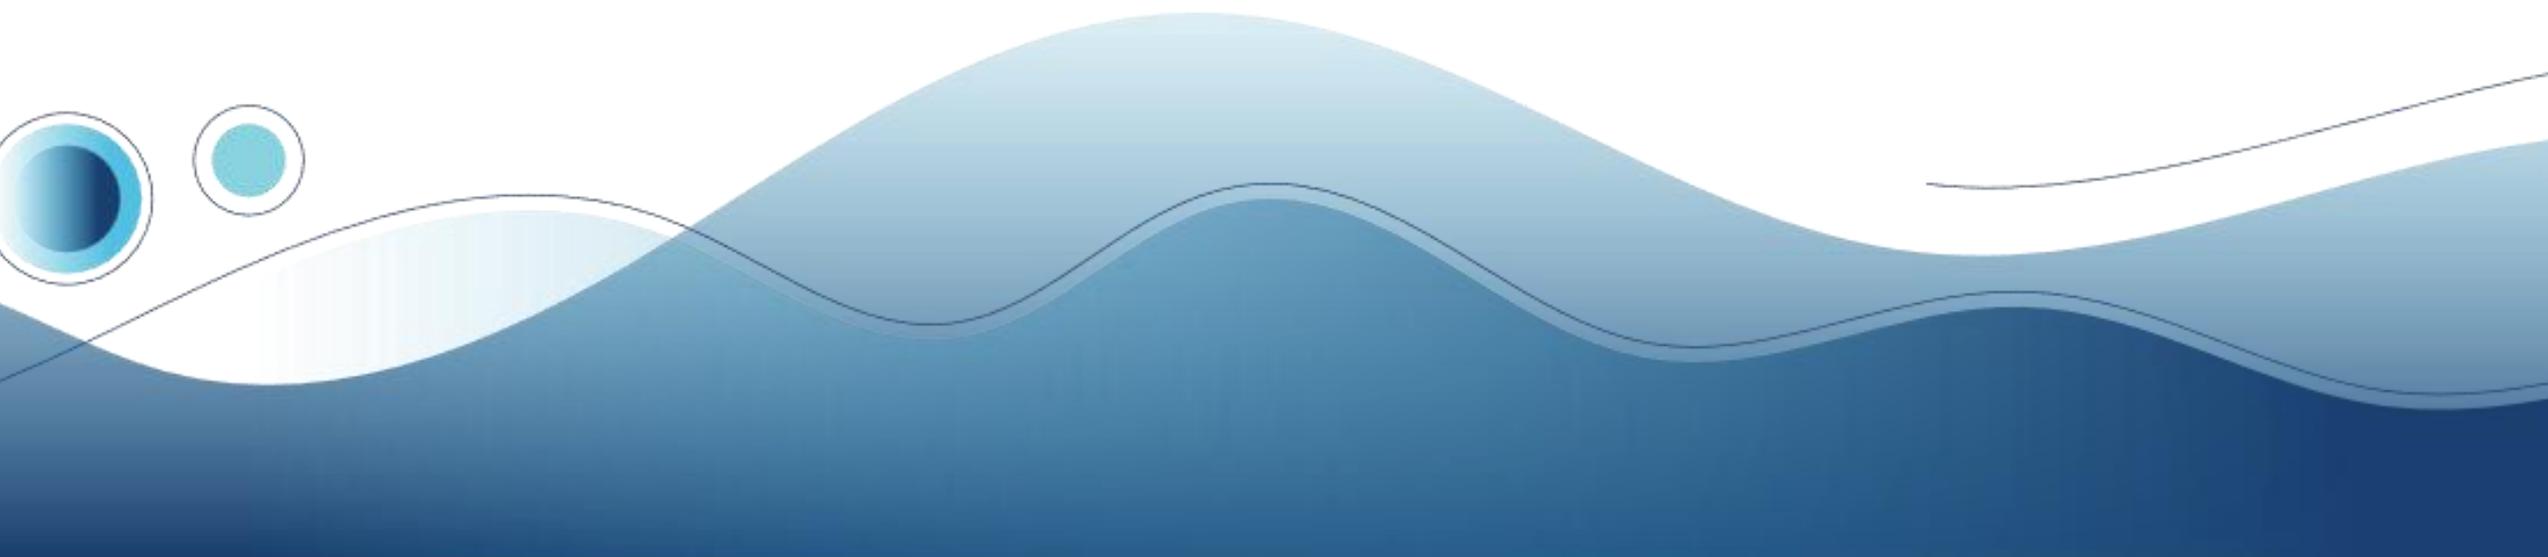

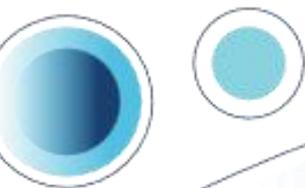

**Share one takeaway  
or insight**

**Name a moment of  
clarity or impact**

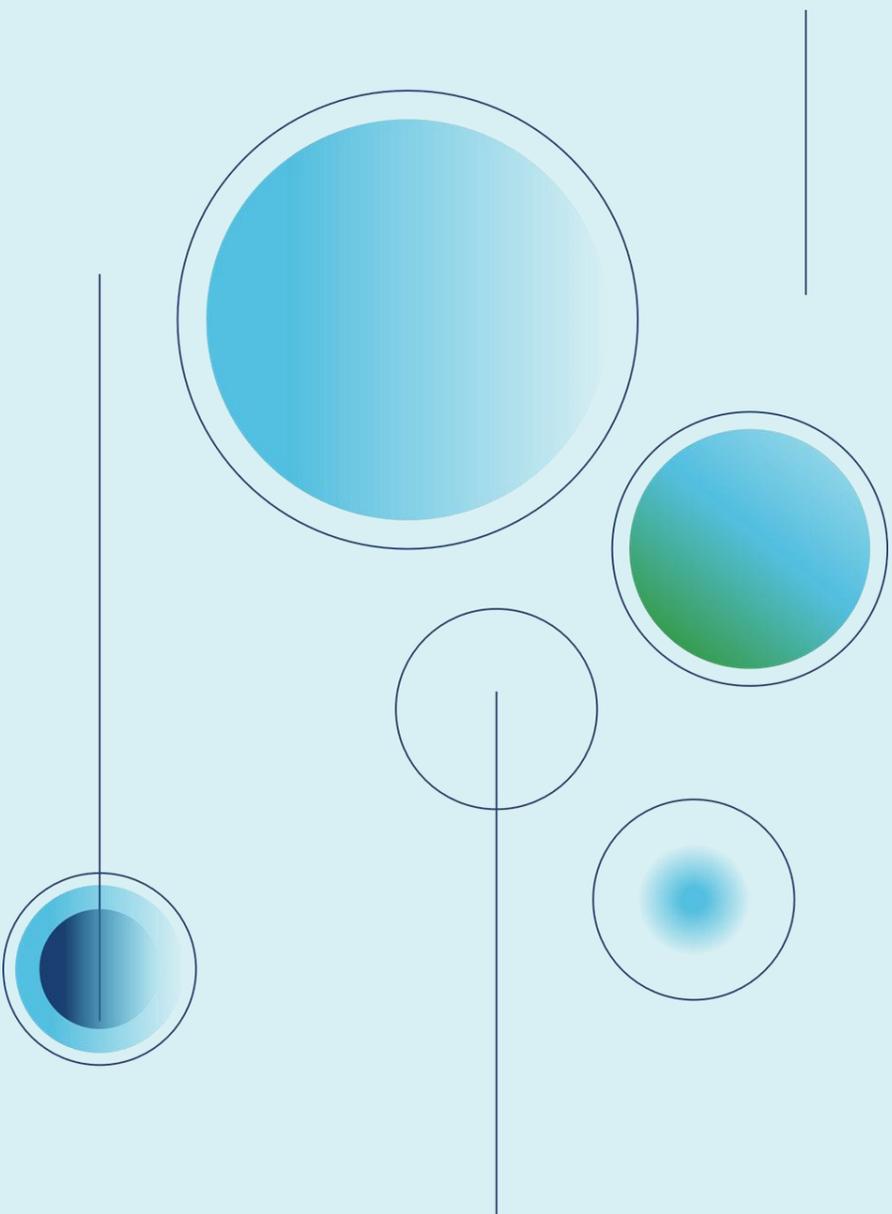

# PARKING LOT
